

SUPPORTING THE ANIMAL FOOD INDUSTRY'S FUTURE SUCCESS THROUGH RESEARCH & EDUCATION

With a mission to advance understanding and trust in a sustainable feed and pet food supply chain, the Institute for Feed Education and Research (IFEEDER) is collaborating with the animal food industry and its stakeholders on multiple research and education initiatives.

Sustainability Road Map and Industry Toolkit Launches New Tools

As part of its sustainability road map work, this year, IFEEDER added several resources to its Animal Food Industry Sustainability Toolkit. Working in collaboration with Iowa State University (ISU), IFEEDER described 16 issues that are 'material' to the industry, identifying the value and importance of each and highlighting examples of industry members' actions and benefits received. In addition, working with the Context Network and the Animal Nutrition Association of Canada, IFEEDER conducted value chain stakeholder assessments and a literature review of ration innovation-derived performance and environmental metrics to create a comprehensive database and resource materials for the animal food industry. Additional resources are being developed based on industry life cycle assessment (LCA) experiences and perspectives. This work is being supported by over 25 IFEEDER contributors.

Pet Food Research Study Under Way

IFEEDER's 2019 pet food report found that U.S. pet food manufacturers use roughly 8.65 million tons of animal- and plant-based ingredients for dog and cat food to provide pets with complete nutrition. As trends in pet ownership and care shift, it is important to update the pet food ingredient dataset. The dataset is used by industry members, upstream and downstream value chain stakeholders, and researchers to

understand the scope and status of pet food components and the industry's contribution to rural economies. With support from the American Feed Industry Association (AFIA), the Pet Food Institute (PFI), the Fats and Protein Research Foundation (FPRF) and IFEEDER contributors, IFEEDER launched a new pet food study, with results expected in early 2025.

Feed Ingredient Consumption Analysis in Progress

IFEEDER launched a research project to provide the most precise, comprehensive analysis of feed ingredient use for aquaculture, beef cattle, broilers, dairy cattle, hogs, horses, layers, sheep and meat goats. The research will build on previous years' reports, quantifying the use of 48 ingredients. As animal and crop production shifts, industry members, value chain stakeholders and researchers need data to understand the scope and status of feed ingredient components and their use. With support from the AFIA, FPRF and IFEEDER contributors, the feed ingredient report update will be made available in early 2025.

Developing the 12th Edition of Nutrient Requirements for Swine

Serving as the basis for formulating U.S. commercial and research swine diets, IFEEDER is supporting the update of the Nutrient Requirements of Swine to ensure advances in swine nutrition research are incorporated. Collectively, feed efficiency, feed cost reductions and profitability drive continuous improvements in pork production. Collaborators include National Pork Board, National Corn Growers Association, United Soybean Board and IFEEDER Contributors.

Advancing Feed Ingredient LCAs

IFEEDER has two projects under way to enhance feed ingredient datasets within the Global Feed LCA Institute (GFLI) database. First, in collaboration with ISU and funds awarded by the United Soybean Board, IFEEDER is updating the corn and soybean data within the GFLI database, ensuring the LCAs are generated with the most recent U.S. Department of Agriculture statistics. Second, in collaboration with an ISU-led team and funded by the National Pork Board, IFEEDER is supporting efforts to add key ingredients used in swine diets to the GFLI database.

Informing Dietary Interventions to Mitigate Enteric Methane Emissions

In partnership with The Nature Conservancy and Dairy Management Inc., dairy feed management additives are being evaluated to inform greenhouse gas mitigation actions for cattle. Funded by a USDA

Conservation Innovation Grant, the work is focusing on economic and social considerations to inform the Natural Resources Conservation Service's conservation incentive programs for farmers.

Engaging the Industry

Gaining insights into IFEEDER's efforts is now just a click away. Whether it is checking out the new website at IFEEDER.org, reading the monthly e-newsletter or IFEEDER Fodder blog, listening to a recent podcast or keeping up with activities on LinkedIn, people can learn what IFEEDER has under way and provide feedback.

SCHOLARSHIPS

EMC Scholarship Fund

In fiscal 2023-24 IFEEDER and AFIA's Equipment Manufacturers Committee raised over \$42,800 to support students pursuing feed or grain sciences careers. Together, we awarded scholarships at:

CAL POLY

IOWA STATE
UNIVERSITY

KANSAS STATE
UNIVERSITY

NC STATE
UNIVERSITY

NDSU NORTH DAKOTA
STATE UNIVERSITY

West Virginia University

Kenny Berg Liquid Feed Research Fund

In fiscal 2023-24, IFEEDER and AFIA's Liquid Feed Committee raised nearly \$39,700 to support the Kenny Berg Research and Education Fund, which strengthens the science behind delivering nutrients through liquid feed.

FINANCIAL HIGHLIGHTS

For the period ending April 30, 2024

Support & Revenue

Unrestricted **\$80K**

Restricted **\$308K**

Equipment Manufacturers Committee **\$43K**

In Kind **\$205K**

Program Expenses

Program **\$375K**

Kenny Berg Research & Education Fund **\$10K**

Scholarships **\$35K**

2023-24 FISCAL YEAR DONORS

Donors drive the future of the animal food industry. Thank you for your generosity!
